SYMPOC’s dispatcher software enables effortless central control of your PTOC fleet. The dispatcher is linked to PTTI’s portal, which allows you to manage your fleet’s individual and group setup instantaneously. The cloud-based portal allows each radio within the fleet to update to reflect any related settings changed the next time it is online.

**Features**

- View all contacts and groups within the fleet
- Identify online and offline handsets
- Open up multiple communication channels simultaneously

SYMPOC’s dispatcher software requires an annual license in the same way which every SIM does. The dispatcher can be set up either remotely by SYMPOC and PTTI, or by the user themselves.
